DETAILED ACTION

Election/Restrictions

1. This application contains claims directed to the following patentably <u>distinct</u> <u>species</u> of the claimed invention:

Species I: Fig. 1 (a <u>networked system</u> for implementing a video distribution system in accordance with <u>one embodiment of the invention</u>);

Species II: Fig. 7 (a block diagram of a <u>video encoder</u> according to <u>an embodiment of the invention</u>);

Species III: Fig. 8 (a block diagram of a <u>predictive-coded video object plane (P-VOP) encoder</u> according to <u>an embodiment of the invention</u>);

Species VI: Fig. 9 (a flowchart illustrating a process according to <u>an</u> <u>embodiment of the invention</u> of <u>encoding a portion of a video bitstream to include a redundant motion vector);</u>

Species V: Fig. 10 (a flowchart illustrating a process according to <u>an</u> <u>embodiment of the invention</u> of <u>optionally encoding a portion of a video bitstream with sequential intra-frames</u> to enhance the robustness of the bitstream);

Species VI: Fig. 11 (a flowchart illustrating another process according to <u>an</u> <u>embodiment of the invention</u> of <u>encoding a portion of a video bitstream bitstream to include a redundant motion vector that can be referenced to a selected previous frame);</u>

Species VII: Fig. 13 (a block diagram of a <u>video decoder</u> according to <u>an embodiment of the invention</u>);

Species VIII: Fig. 14 (a block diagram of <u>a predictive-coded video object plane</u> (P-VOP) decoder according to <u>an embodiment of the invention</u>);

Species IX: Fig. 15 (a flowchart illustrating a process according to <u>an</u> <u>embodiment of the invention</u> of <u>decoding a portion of a video bitstream encoded with redundant motion vectors, where the process uses a redundant motion vector as a <u>backup to a standard motion vector</u>); and</u>

Species X: Figs. 16A-16B (flowcharts illustrating another process according to an embodiment of the invention of decoding a video bitstream encoded with redundant

Art Unit: 2621

motion vectors, where the process uses a redundant motion vectors as a backup to a standard motion vector or in response to a high error estimate).

Applicant is required under **35 U.S.C. 121** to elect a <u>single disclosed species</u> for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claim is considered generic.

Applicant is advised that a reply to this requirement must include an identification of the Species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, Applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, Applicant must indicate which are readable upon the elected species.

MPEP § 809.02(a).

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, Applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the Examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

Art Unit: 2621

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Conclusion

- 2. Any inquiry concerning this communication or earlier communications from the Examiner should be directed to *Shawn S. An* whose telephone number is 571-272-7324.
- 3. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
- 4. Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
